

PRODUCT DESCRIPTION SHEET
AGGRESSIVE ATHLETIC MIX

Athletic fields need fast growing, tough wear resistance grasses that can hold up to the summer heat and drought.

Lakeside Sod Supply introduces our Aggressive Athletic Mix offering aggressive characteristics helpful for providing and maintaining dense, tough turf.

Fifty percent of the mix is Thermal Blue Blaze and Jumpstart Kentucky Blue. Thermal Blue is a heat tolerant hybrid-cross between Kentucky Blue and Texas Blue Grass. It loves the heat and continues to grow well into summer when other grasses have slowed. Imagine extending the growing season further into the summer! Jumpstart Kentucky Bluegrass is fast to establish, fast to recover, and fast to green up.

The other fifty percent of the mix is Showtime and Gray Star. Both are top performers in the perennial rye grass family, resulting in good speed of establishment, dark green color and low grow qualities.

Put the two together and you have:

- Improved heat tolerance
- Better summer performance and growth
- Faster establishment
- Extensive Rhizome growth
- Good wear tolerance.

A sure fire mix for the tough Western New York summers on our athletic fields!

25% Thermal Blue Blaze Kentucky Bluegrass
25% Jumpstart Kentucky Bluegrass
25% Gray Star Perennial Ryegrass
25% Showtime Perennial Ryegrass

Seed Rate 3-4 lbs per 1000 sq. ft.
