

It's fescue, but better.

Proven

University and independent testing has proven conclusively that RTF is a cut above the competition.

Results

With RTF sod you instantly get a healthy, mature lawn, grown by the top turfgrass producers in the world.

Unique

RTF's patented technology fills gaps and bare spots fast and requires 30% less water than other varieties.

What is RTF?

RTF® is the only Tall Fescue with true rhizomes. Those rhizomes help RTF quickly fill in damaged and bare spots in your turf with new shoots of grass. This results in less over-seeding, fewer weed problems, and no wide-leafed ugly clumps of grass like other tall fescues can form. RTF's extensive root system has the ability to draw moisture from a deep soil profile, which helps it use less water and makes it adaptable in a wide range of soils. It has excellent heat and drought tolerance, with less irrigation.

Praise for RTF:

"I've planted seed and sod lawns (etc) for years. This is the best color, sustainability, disease resistant, and overall performance in a fescue I've ever had."

- Jeffery Vandersnick, Nebraska

Ideal Applications:

- Lawns

- Golf Course

- Parks

- Cemeteries

- Commercial

- Sports Fields

Improved Value for the Turf Professional:

With the aid of rhizomes, the sod anchors itself faster and water requirements are reduced. RTF also requires less overseeding and results in fewer weed problems.

Grows Great in Sun or Shade:

RTF will not brown out in the intense summer heat and is one of the most shade tolerant cool season grasses. It is excellent in the transition zone and other tall fescue regions.

Excellent Disease and Insect Resistance:

RTF is endophyte enhanced for improved insect, disease, and drought tolerance and is environmentally friendly, reduces chemical, and fertilizer inputs.

Excellent Color and Density:

RTF has fine leaves which produce a very dense, uniform lawn that greens up early in the spring. It also keeps its rich green color in stressful hot temperatures.

Deep Root System:

RTF's deep root system develops rapidly and possesses excellent drought and heat tolerance with less irrigation. RTF is adaptable to a wide range of soil conditions.

Utility Patent: #6,677,507

Available as seed or sod
